

ECOFIBER *High Performance Seepage Loss Additive*

DESCRIPTION

ECOFIBER is a synergistic blend of finely ground fibers (<100 mesh) creating a high performance seepage loss additive. **ECOFIBER** should be used to seal off under balanced depleted sands preventing stuck pipe and seepage losses. It provides strength and integrity to the wall cake to prevent lost circulation. **ECOFIBER** can be used to protect the pay zone from the invasion of fine mud solids that can damage the pay zone.

ADVANTAGES

Compatible with All Types of Drilling Fluids
Environmentally Safe
Prevents Stuck Pipe
Controls Seepage Losses
Prevents Lost Circulation
Protects the Pay Zone

APPLICATION

Mix **ECOFIBER** through the rig hopper. It can be used in batch treatments from 10-30 ppb pills sweeping the hole as needed to control seepage losses. It can also be mixed in the entire system from 2-10 ppb.

TYPICAL PROPERTIES

Composition.....Fibrous Blend
Color.....Reddish Brown
Bulk Density.....25-30lb/ft³
pH.....5-6

PACKAGING

ECOFIBER is packaged in 25 lb. multi-walled paper export bags, palletized and shrink-wrapped 80 sxs/pallet.
