

ECODRILL

High Performance Filtrate Reducer

DESCRIPTION

ECODRILL is a synthetic polymer providing superior fluid loss control for high temperature applications in water base muds. It is resistant to contaminants such as salt and lime and functions in high temperature environments. Additions of **ECODRILL** will reduce both API and HTHP filter losses and provide for a more stable wellbore while drilling troublesome shales and clays.

ADVANTAGES

Reduces Filtrate in WBM's
Helps Prevents Stuck Pipe
Stabilizes Wellbore
Works in Severe Environments

APPLICATION

ECODRILL should be mixed through the rig hopper. Treat WBM systems with 2-10 ppb. Treat system as needed during drilling operations to control filtrate loss.

TYPICAL PROPERTIES

Water Solubility.....50%
Color.....Black Powder
Specific Gravity..... 1.40 -1.48

PACKAGING

ECODRILL is packaged in 50 lb. multi-walled paper export bags, palletized and shrink-wrapped 50 sxs/pallet.
