

# **ECONITE**

*High Performance Liquid Gilsonite*

---

## **DESCRIPTION**

**Econite** is a liquid gilsonite dispersed in a highly inhibitive polyglycerol base for water based drilling fluids. **Econite** provides superior fluid loss control and inhibition of hydratable shales, reduces torque and drag and provides for a more stable wellbore while drilling troublesome shales and clays. **Econite** is environmentally acceptable and can be used in high temperature environments.

## **ADVANTAGES**

Reduces Filtrate in WBM's  
Helps Prevents Stuck Pipe  
Lubricates & Stabilizes Wellbore  
Works in Severe Environments

## **APPLICATION**

**Econite** should be mixed through the rig hopper. Treat WBM systems with 1-3% by volume. Treat system as needed during drilling operations to stabilize the wellbore.

## **TYPICAL PROPERTIES**

**Color**.....Dark viscous liquid

## **PACKAGING**

**Econite** is packaged in 55 gal drums.
