

ECOFLO

VISCOSIFIER

HIGH PERFORMANCE

DESCRIPTION **ECOFLO** is a xanthan biopolymer providing superior carrying capacity for solids in water base drilling and completion fluids. It provides rheology control through low shear rate viscosities which allows for laminar flow in the annulus to transport drilled solids. It is also shear thinning which maximizes penetration rates.

- ADVANTAGES**
- Laminar flow in annulus
 - Transports and suspends solids
 - Shear thinning
 - Minimum friction pressures

APPLICATION **ECOFLO** should be mixed slowly through the rig hopper. Treat WBM systems with 1-2 ppb. Treat system as needed during drilling operations to control filtrate loss.

PROPERTIES

pH6.5 to 8.5
Color.....White Powder
Bulk Density..... 40-60 lb ft³

PACKAGING **ECOFLO** is packaged in 55 lbs. multi-walled paper export bags, palletized and shrink-wrapped 40 sxs/pallet.
